Design and Engineering Features of the Yamaha RD 125 AS3 Motor

- Engine Architecture and Construction

The Yamaha RD 125 AS3 motor features a square engine design with bore and stroke measuring 54mm each. This configuration balances power and torque, providing a smooth yet spirited riding experience. The engine is constructed with a die-cast aluminum cylinder head and a cast iron cylinder liner, ensuring durability under typical riding conditions.

- Two-Stroke Power Delivery

As a two-stroke engine, the RD 125 AS3 completes a power cycle every revolution of the crankshaft, enabling it to produce more power relative to its size compared to four-stroke engines. The engine's power is delivered via a transistorized CDI ignition system, which enhances spark timing precision for optimal combustion.

- Lubrication System: Yamaha Autolube

One of the standout features of the RD 125 AS3 is its Autolube system—a semi-automatic oil injection setup that mixes oil with gasoline, eliminating the need for pre-mixed fuel. This system not only simplifies maintenance but also reduces emissions and improves efficiency.

- Carburetor and Fuel System

The 24mm constant vacuum (CV) carburetor ensures smooth throttle response and good fuel economy. Its design maintains consistent air-fuel mixture delivery across various engine speeds, contributing to the bike's overall rideability.

- Cooling and Exhaust

Being air-cooled, the engine relies on airflow over fins cast into the cylinder head and cylinder walls for temperature regulation. The expansion chamber exhaust is designed to optimize scavenging and power output, characteristic of classic two-stroke motorcycles.

- Clutch and Transmission

A wet multi-plate clutch transmits power smoothly to the 5-speed gearbox, which features close-ratio gears tailored for sporty riding and quick acceleration.
