The key decision is whether to proceed with the project based on economic viability.

Objectives

- Evaluate the financial feasibility of the solar PV project.
- Compare the project's net present value (NPV), internal rate of return (IRR), and payback period against alternative investments.
- Incorporate factors such as government incentives, energy prices, and maintenance costs.

Methodology

- Estimation of initial investment costs, including land, equipment, and installation.
- Forecasting annual energy generation based on solar insolation data.
- Calculation of annual revenue from energy sales and savings.
