What role did starship design and construction play in the conflicts and exploration missions of 2151-2293? Starship design and construction were crucial in enabling the Federation's exploration efforts, such as the missions of the USS Enterprise, and in defending against threats like the Romulans and Klingons. Advances in shipyards and ship technology allowed for more reliable, faster, and more heavily armed ships, which supported both exploration and military engagements during this period. Are there significant differences in starship construction between Federation and non-Federation ships from 2151 to 2293? Yes, Federation starships were primarily built at Utopia Planitia and emphasized modular design, scientific capabilities, and warp performance. In contrast, Klingon and Romulan ships were constructed in

their respective yards, often focusing on warship design, with more aggressive weaponry and armor. Cardassian ships, meanwhile, prioritized stealth and deception. These differences reflect each species' technological focus and strategic priorities.
