Sample Guided Study Questions and Answers

Question 1: What causes the phases of the moon?

Answer: The phases of the moon are caused by the changing angles of the moon, Earth, and Sun as the moon orbits Earth. As the moon orbits, different portions of its surface are illuminated by the Sun, creating the different phases.

Question 2: Name and describe the four main lunar features.

Answer:

- **Craters:** Large, round depressions caused by meteor impacts.
- **Mare:** Dark, flat plains formed by ancient volcanic lava flows.
- **Highlands:** Elevated, mountainous regions that are brighter than maria.
- **Rilles:** Narrow channels or valleys on the lunar surface.

Question 3: How does the moon influence ocean tides on Earth?

Answer: The moon's gravitational pull creates a force that causes the water in Earth's oceans to bulge out in the direction of the moon. As Earth rotates, different areas pass through these bulges, resulting in high and low tides.

Activities and Experiments in the Workbook

1. Moon Phases Observation Activity

Students are encouraged to observe the moon over a month, record the appearance each night, and compare their observations with diagrams. This activity helps in understanding the lunar cycle firsthand.

2. Model of the Moon's Orbit

Using a ball and a light source to simulate the sun, students can model how the moon orbits Earth and how this results in different phases.

3. Tides Simulation

Using water and small objects, students can demonstrate how the moon's gravitational pull influences tides.
