A critical component of any ecommerce site is the shopping cart. PHP templates often include pre-built cart systems that support adding, updating, and removing products, calculating totals, and managing checkout workflows.

- User Management and Authentication

Templates typically feature user registration, login, and profile management modules, allowing customers to create accounts, track orders, and save preferences securely.

- Product Catalog and Search Capabilities

Efficient product display pages with filtering and search options enhance user experience. PHP scripts dynamically load product data from databases, enabling easy updates and inventory management.

- Payment Gateway Integration

Secure integration with popular payment providers (PayPal, Stripe, etc.) is essential. Many templates come with built-in support or straightforward integration methods for such services.

- Administrative Dashboard

A backend interface allows store owners to add or modify products, view orders, manage users, and generate reports—all built into the template or customizable in Dreamweaver.

- SEO Optimization

Templates often include semantic HTML, meta tags, and clean URLs to improve search engine rankings, increasing visibility for online stores.
