View templates in Revit 2014 control the visual presentation of views—plan, section, elevation, 3D—and ensure consistency across projects. Templates typically include:

- Visibility/Graphics overrides
- Scale settings
- Graphic display options
- Annotation styles

Having default view templates in the project template promotes uniformity and expedites view creation during project development.

2. Families and Content

Revit's library of families—parametric components representing doors, windows, furniture, structural elements—is a core element of templates. Templates often come preloaded with industry-standard families and custom families tailored to specific project standards.

3. Project Units and Parameters

Templates specify default units for dimensions, areas, volumes, and other measurements, aligning with regional standards. Additionally, project parameters—custom metadata fields—are set up for consistent data management.

4. Worksets and Collaboration Settings

For collaborative projects, templates include predefined worksets, worksharing settings, and permissions, facilitating team coordination right from project inception.

5. Annotation and Title Blocks

Standardized title blocks and annotation styles embedded in templates ensure uniform presentation and professional documentation.

Customization and Creation of Revit Architecture 2014 Templates

Creating an effective template involves a strategic approach to standardization and flexibility. Here's an investigative overview of the process and best practices:

Step-by-Step Customization Process
