Sample IPC Chemistry Questions and Review Answers

Question 1: Which material is most resistant to chemical corrosion in plumbing systems?

- a) Copper
- b) PVC
- c) Cast iron
- d) PEX

Review Answer: b) PVC

Explanation: PVC (Polyvinyl Chloride) is highly resistant to many chemicals, making it suitable for various plumbing applications where chemical exposure is a concern. Copper, while durable, can corrode under certain conditions, and cast iron is susceptible to rust. PEX also has good chemical resistance but less so than PVC for some aggressive substances.

Question 2: What is the primary cause of pipe corrosion in water systems?

- a) Low pH levels
- b) High temperature
- c) Mechanical stress
- d) Ultrafiltration

Review Answer: a) Low pH levels

Explanation: Acidic water (low pH) accelerates corrosion of metal pipes, especially copper and iron. Maintaining proper pH levels helps prevent corrosive reactions and prolongs pipe life.

Question 3: Which of the following water treatments involves adding chlorine to disinfect water?

- a) Filtration
- b) Softening
- c) Chlorination
- d) Reverse osmosis

Review Answer: c) Chlorination

Explanation: Chlorination involves adding chlorine to water to kill bacteria and other pathogens, ensuring water safety. It is a standard disinfection method in plumbing systems.
