Understanding Regression Analysis

What Is Regression Analysis?

Regression analysis is a statistical technique used to examine the relationship between a dependent variable and one or more independent variables. Its primary goal is to model the expected value of the dependent variable based on the independent variables, enabling predictions and insights into the underlying data structure.

Types of Regression Analysis

- **Linear Regression:** Models the relationship assuming a linear connection between variables.
- **Multiple Regression:** Incorporates multiple independent variables to predict the dependent variable.
- **Logistic Regression:** Used when the dependent variable is categorical, especially binary outcomes.
- **Polynomial Regression:** Extends linear regression by including polynomial terms to model nonlinear relationships.
