Step 1: Accessing the Switch CLI

- Drag a switch device into the Packet Tracer workspace.
- Click on the switch and select the CLI tab.
- Power on the device if needed.
- Enter privileged EXEC mode by typing:

```
...
```

```
enable
```

```
...
```

Step 2: Entering Global Configuration Mode

To modify switch settings, access global configuration mode:

...

configure terminal

...

Basic Switch Configuration Tasks

Below are the essential configurations every network administrator should master:

- Assigning a Hostname

Giving your switch a recognizable name simplifies management:

...

Switch(config) hostname MySwitch

...

Set console and VTY (Telnet/SSH) passwords to prevent unauthorized access:

Console password:

...

MySwitch(config) line console 0

MySwitch(config-line) password cisco123

MySwitch(config-line) login

MySwitch(config-line) exit

...

VTY password:

...

MySwitch(config) line vty 0 4

MySwitch(config-line) password cisco123

MySwitch(config-line) login

MySwitch(config-line) exit

...

- Enabling Secret Password

Set an encrypted enable password for privileged mode:

...

MySwitch(config) enable secret mysecretpass

...

- Configuring VLANs

VLANs segment network traffic logically:

...

MySwitch(config) vlan 10
