Exercises in MS Access with Answers: A Comprehensive Guide for Beginners and Intermediate Users

Microsoft Access remains one of the most popular database management systems, especially among small to medium-sized businesses and individual developers. Its user-friendly interface, combined with powerful features, makes it an ideal platform for creating, managing, and analyzing data. For learners and practitioners aiming to master MS Access, practicing through exercises is an effective way to solidify understanding and develop practical skills. This article provides a comprehensive, detailed exploration of exercises in MS Access, complete with answers, explanations, and analytical insights to foster a deeper grasp of the platform's functionalities.

Understanding the Importance of MS Access Exercises

Before diving into specific exercises, it's crucial to recognize why practicing with exercises enhances learning in MS Access. Exercises serve as a bridge between theoretical knowledge and real-world application. They help users:

- Reinforce understanding of core concepts such as tables, queries, forms, and reports.
- Develop problem-solving skills tailored to database design challenges.

- Discover best practices for data normalization and integrity.
- Gain confidence in creating and managing databases efficiently.

By systematically working through exercises, learners can identify gaps in their knowledge and build a solid foundation for more advanced topics, such as VBA scripting or complex database architecture.

Structured Approach to MS Access Exercises

Effective exercises are well-structured, progressive, and aligned with learning objectives. They typically follow a sequence that mirrors real-world database development stages:

- Design and Planning
- Creating Tables and Relationships
- Data Entry and Validation
- Query Creation
- Form Design
- Report Generation
- Advanced Features (VBA, macros)

Below, we'll explore each stage with detailed exercises, accompanied by answers and explanations to guide learners through the process.

Section 1: Designing a Database - Planning and Requirements Gathering

Exercise 1:

Scenario: You are tasked with designing a database for a small library. The database should store information about books, authors, members, and borrowings.

Question:

Identify the key entities and their attributes. Create an Entity-Relationship (ER) diagram outline.

Answer & Explanation:

Entities and Attributes:

- Books: BookID (PK), Title, Genre, PublicationYear, AuthorID (FK)
- Authors: AuthorID (PK), FirstName, LastName, BirthDate
- Members: MemberID (PK), FirstName, LastName, Address, PhoneNumber, MembershipDate
- Borrowings: BorrowingID (PK), BookID (FK), MemberID (FK), BorrowDate, ReturnDate

ER Diagram Outline:

- One-to-many relationship between Authors and Books (one author can write many books).
- Many-to-many relationship between Books and Members through the Borrowings table (a book can be borrowed multiple times by different members, and a member can borrow many books).
- The Borrowings table acts as a junction table linking Books and Members.

Key Takeaway:

This exercise emphasizes understanding entities, attributes, primary keys (PK), and foreign keys (FK), which are foundational for creating logical database structures.

Section 2: Creating Tables and Establishing Relationships

Exercise 2:

Instruction: Using MS Access, create the tables for the library database based on the previous exercise. Define appropriate data types and set primary keys. Then, establish relationships between tables.

Answer & Explanation:

Steps:

- Open MS Access and create a new blank database named "LibraryDB."
- Create the Authors table with fields:
 - AuthorID: AutoNumber (Primary Key)
 - FirstName: Short Text
 - LastName: Short Text
 - BirthDate: Date/Time

- Create the Books table with fields:

- BookID: AutoNumber (PK)
- Title: Short Text
- Genre: Short Text
- PublicationYear: Number
- AuthorID: Number (Foreign Key)

- Create the Members table:

- MemberID: AutoNumber (PK)
- FirstName: Short Text
- LastName: Short Text
- Address: Short Text
- PhoneNumber: Short Text
- MembershipDate: Date/Time

- Create the Borrowings table:

- BorrowingID: AutoNumber (PK)
- BookID: Number (FK)
- MemberID: Number (FK)
- BorrowDate: Date/Time
- ReturnDate: Date/Time

Establish Relationships:

- Go to Database Tools > Relationships.
- Drag and connect AuthorID in Authors to AuthorID in Books (one-to-many).
- Drag and connect BookID in Books to BookID in Borrowings (one-to-many).
- Drag and connect MemberID in Members to MemberID in Borrowings (one-to-many).

Key Takeaway:

Proper table creation with appropriate data types and relationships ensures data integrity and

efficient database operations.

Section 3: Data Entry and Validation

Exercise 3:

Scenario: You need to add sample data to the tables and ensure data validation rules are in place to prevent errors.

Question:

Describe how to input data into the 'Authors' table and set validation rules for the 'BirthDate' field to prevent future dates.

Answer & Explanation:

Data Entry:

- Open the 'Authors' table in Datasheet View.
- Enter sample data, e.g.,
- FirstName: "Jane"
- LastName: "Austen"
- BirthDate: "1775-12-16"

Setting Validation Rules:

- Switch to Design View.
- Select the 'BirthDate' field.
- In the Field Properties pane, set the 'Validation Rule' to:

,

- Set the 'Validation Text' to:

"BirthDate cannot be in the future."

Testing:

- Try entering a future date; Access will prompt an error, enforcing data correctness.

Key Takeaway:

Validation rules are essential for maintaining data accuracy and preventing logical errors in the database.

Section 4: Creating Queries for Data Retrieval

Exercise 4:

Scenario: Generate a list of all books borrowed by a specific member, say, MemberID = 3.

Question:

Construct an SQL query to fetch the book titles borrowed by this member.

Answer & Explanation:

SQL Query:

```
```sql
```

```
SELECT Books.Title
```

```
FROM Books
```

```
INNER JOIN Borrowings ON Books.BookID = Borrowings.BookID
```

```
WHERE Borrowings.MemberID = 3;
```

```
```
```

Explanation:

- The query joins the 'Books' and 'Borrowings' tables on 'BookID'.
- It filters records where 'MemberID' equals 3.
- The result displays the titles of all books borrowed by that member.

Alternative Using Query Design:

- Use Query Design view, add 'Books' and 'Borrowings'.
- Join the tables on 'BookID'.
- Add criteria: 'Borrowings.MemberID' = 3.
- Select 'Books.Title' to display.

Key Takeaway:

Understanding joins and filters in queries enables precise data retrieval critical for reports and analysis.

Section 5: Designing Forms for User Interaction

Exercise 5:

Scenario: Create a form to allow easy data entry of new books, linked to the authors table via a dropdown.

Question:

Describe the steps to design this form in MS Access.

Answer & Explanation:

Steps:

- Go to Create > Form Wizard.
- Select the 'Books' table as the source.
- Choose fields: BookID (hidden), Title, Genre, PublicationYear, AuthorID.
- When prompted for related tables, select 'Authors' for the 'AuthorID' field.
- Choose 'Combo Box' for the 'AuthorID' field to select authors from a dropdown list.
- Complete the wizard and switch to Form View.
- Adjust layout for clarity.

Enhancements:

- Set the combo box to display 'FirstName' and 'LastName' but store 'AuthorID'.
- Add validation to ensure no duplicate BookID.

Key Takeaway:

Designing intuitive forms streamlines data entry and reduces errors, especially when linked with lookup fields.

Section 6: Generating Reports for Data Analysis

Exercise 6:

Scenario: Create a report that shows all overdue books, i.e., books that have not been returned past their due date (assume due date is 14 days after BorrowDate).

Question:

Outline the process and provide the SQL query for this report.

Answer & Explanation:

Process:

- Create a new query based on the 'Borrowings' table.
- Include fields: BorrowingID, BookID, MemberID, BorrowDate, ReturnDate.
- Add a calculated field for DueDate: `DueDate: DateAdd("d", 14, [BorrowDate])`.
- Set criteria:
 - `ReturnDate` is null or `ReturnDate` > `DueDate`.
 - Or, if 'ReturnDate'
