science today class 4 answers are an essential resource for students preparing for their science examinations and seeking to understand the fundamental concepts covered in their syllabus. This article provides comprehensive and detailed answers to the key questions and topics typically included in the Class 4 science curriculum. Whether you are a student, parent, or teacher, this guide aims to clarify important scientific ideas, promote better understanding, and improve exam performance.

Introduction to Science for Class 4

Science at the Class 4 level introduces students to the basic principles of the natural world. It encourages curiosity about how things work and helps develop a scientific attitude. The syllabus generally covers topics like plants and animals, human body, matter and materials, environment, and natural phenomena.

Understanding these topics through detailed answers helps students grasp concepts effectively and build a solid foundation for future learning.

Important Topics and Their Class 4 Science Answers

1. Plants and Their Parts

Q: What are the main parts of a plant?

Plants have several important parts that help them survive and grow. The main parts of a plant are:

- **Root:** Anchors the plant in the soil and absorbs water and minerals.
- **Stem:** Supports the plant and transports nutrients and water from roots to leaves.
- **Leaves:** The food-making factory of the plant through photosynthesis.
- **Flowers:** Reproductive part of the plant that develops into fruits and seeds.
- **Fruits and Seeds:** Help in reproduction and growing new plants.

Q: Why are leaves green?

Leaves are green because they contain a pigment called chlorophyll. Chlorophyll absorbs sunlight and helps in the process of photosynthesis, which is how plants make their food. The green color is a result of chlorophyll reflecting green light.

2. Animals and Their Habitats

Q: Name some animals and their habitats.

Animals live in different habitats depending on their needs. Here are some examples:

- **Land animals:** Lions, elephants, tigers, dogs
- **Water animals:** Fish, whales, turtles
- **Aerial animals:** Birds like sparrows, eagles, bats

Q: How do animals adapt to their environment?

Animals adapt to their environment in various ways to survive. For example:

- Camouflage to hide from predators (e.g., chameleon)
- Special body parts (e.g., webbed feet of ducks for swimming)
- Behavioral changes (hibernation during winter)

3. Human Body and Health

Q: What are the main parts of the human body?

The human body has several vital parts, including:

- **Head:** Contains the brain, eyes, ears, nose, and mouth.
- **Trunk:** Houses the chest and abdomen, containing vital organs like the heart, lungs, stomach, and liver.
- **Limbs:** Arms and legs that help in movement and handling objects.

Q: Why is it important to eat healthy food?

Eating healthy food provides the energy and nutrients needed for growth, development, and keeping the body healthy. Healthy foods like fruits, vegetables, grains, milk, and protein-rich foods help build strong bones, muscles, and a good immune system.

4. Matter and Materials

Q: What are solids, liquids, and gases?

These are the three states of matter:

- **Solids:** Have a fixed shape and volume. Example: rock, wood, ice
- **Liquids:** Have a fixed volume but take the shape of their container. Example: water, milk
- **Gases:** Do not have a fixed shape or volume. They expand to fill their container. Example: air, steam

Q: How do solids change into liquids and gases?

Solids change into liquids when heated, a process called melting (e.g., ice melting into water). Liquids turn into gases through evaporation or boiling (e.g., water boiling into steam). Gases can also turn back into liquids through condensation.

5. Natural Phenomena

Q: What causes rain?

Rain occurs because of the water cycle. When the Sun heats water from rivers, lakes, or oceans, it turns into vapor and rises into the air. As the vapor cools, it condenses into clouds. When the clouds become heavy, the water falls back to the earth as rain.

Q: Why do we see lightning during a thunderstorm?

Lightning is a flash of electricity that occurs in a thunderstorm. It happens when there is a buildup of static electricity in the clouds, and the electrical discharge creates a bright flash of light. The sound of thunder is caused by the rapid expansion of air around the lightning bolt.
