- Ensure architecture consistency and interoperability.

Objectives of COBIT 5

- Enable effective governance of enterprise IT.
- Ensure IT delivers value to the organization.
- Manage risks and compliance.
- Provide management with decision-making tools.

Overlapping Domains

While their core focuses differ, both frameworks emphasize alignment between IT and business, strategic planning, and risk management. Recognizing these overlaps is fundamental for effective mapping.

The Rationale for Mapping: Why Integrate TOGAF 9 and COBIT 5?

Organizations often adopt multiple frameworks to address distinct needs?architecture development, governance, risk management, compliance, and operational excellence. Integrating TOGAF 9 and COBIT 5 offers several benefits:

- Holistic Governance and Architecture Alignment: Ensuring architecture strategies support governance objectives.
- Streamlined Processes: Reducing duplication and improving communication among teams.
- Enhanced Risk Management: Embedding governance controls within architectural planning.
- Improved Compliance: Ensuring architectural artifacts support regulatory requirements.

Given these benefits, mapping provides a structured approach to harmonize activities, artifacts, and controls, maximizing organizational value.

Methodologies for Mapping TOGAF 9 to COBIT 5

Conceptual Approach

Mapping involves establishing relationships between the components of TOGAF 9 (phases, artifacts, and domains) and COBIT 5 (processes, enablers, and governance objectives). This

process typically follows these steps:

- Identify Corresponding Domains and Objectives: Determine which parts of each framework address similar concerns.
- Define Relationships: Map architecture artifacts to governance processes that utilize or influence them.
- Align Terminology and Metrics: Ensure common understanding and measurement criteria.
- Develop Mapping Matrices: Create visual tools to illustrate relationships.

Practical Tools and Techniques

- Mapping Matrices: Tabular representations showing relationships between processes and artifacts.
- Process Flow Integration: Overlaying architecture development activities within governance processes.
- Reference Framework Integration: Using standard reference models to align concepts.

Existing Mapping Frameworks and Standards

While no universally accepted, detailed mapping exists, several organizations and research initiatives propose mappings:

- COBIT and TOGAF Alignment Guides: Published by The Open Group and ISACA, offering high-level mappings.
- IT Governance Frameworks: Combining COBIT's control objectives with TOGAF's architecture phases.
- Case Studies: Real-world examples illustrating integration in specific domains.

Key Mapping Areas: Deep Dive Analysis

- Architecture Development and Governance Processes

TOGAF 9 ADM Phases (Preliminary, Architecture Vision, Business Architecture, Information Systems Architectures, Technology Architecture, Opportunities & Solutions, Migration Planning, Implementation Governance, Architecture Change Management) correspond with COBIT 5 processes such as:

- EDM01 (Ensure Governance Framework Setting and Maintenance): Establishes governance structures that oversee architecture activities.
- APO02 (Manage Strategy): Aligns architecture vision with enterprise strategy.
- APO03 (Manage Enterprise Architecture): Directly relates to architecture development phases.
- BAI01 (Manage Programs): Implements architecture projects and initiatives.
- DSS05 (Manage Security Services): Ensures architecture addresses security controls.

Mapping Focus:

| TOGAF ADM Phase | Corresponding COBIT 5 Process(s) | Description |

|-----|-----|-----|
-----|

| Preliminary & Architecture Vision | EDM01, APO02 | Establish governance and strategic alignment |

| Business Architecture | APO03, BAI02 (Manage Requirements) | Develop and manage architecture artifacts |

| Information & Technology Architectures| BAI03 (Manage Solutions Identification), DSS01 (Manage Operations) | Design and implement technical solutions |

| Implementation Governance | EDM02 (Monitor, Evaluate and Assess), BAI04 (Manage Availability and Capacity) | Oversee project execution and controls |

- Artifacts and Controls

Mapping artifacts such as architecture repositories, models, and standards to COBIT's enablers and control objectives ensures that architecture outputs are governed properly.

Examples:

- Architecture Repository (TOGAF) aligns with Information and Processes enablers.
- Architecture Principles relate to Policies and Procedures.
- Stakeholder Management aligns with Organizational Structures and People enablers.

- Risk and Compliance Management

COBIT 5 emphasizes risk management through processes like APO12 (Manage Risk) and MEA01 (Monitor, Evaluate and Assess Performance and Conformance). These can be integrated with TOGAF's architecture change management and security architecture to embed risk considerations into architectural decisions.

Challenges and Limitations in Mapping

Despite the apparent alignment, several challenges hinder straightforward mapping:

- Terminology Discrepancies: Different vocabularies and conceptual models.
- Scope Divergence: TOGAF focuses on architecture development, COBIT on governance and controls.
- Granularity Variations: Frameworks differ in detail level, complicating direct correspondence.
- Organizational Context: Variations in organizational maturity and culture influence mapping effectiveness.

Addressing these challenges involves:

- Developing standardized mapping templates.
- Tailoring frameworks to organizational needs.
- Engaging cross-disciplinary teams for holistic understanding.

Practical Recommendations for Organizations

Step-by-Step Approach to Effective Mapping

- Assess Organizational Goals: Clarify strategic priorities and compliance requirements.
- Identify Relevant Framework Components: Select architecture artifacts and governance processes aligned with goals.
- Develop Custom Mapping Matrices: Use industry best practices to tailor relationships.
- Embed Governance into Architecture Development: Incorporate controls and policies from COBIT into TOGAF's ADM phases.
- Establish Continuous Monitoring: Use COBIT's MEA processes to evaluate the effectiveness of architecture governance.
- Train Teams and Stakeholders: Ensure shared understanding of frameworks and their integration.
