Problem 1: Understanding Currency Exchange Rate Movements

Scenario:

Suppose the U.S. dollar (USD) is expected to depreciate against the euro (EUR) over the next six months. How would this expectation influence an American company's decision to engage in a European project?

Analysis:

This problem introduces the concept of currency risk and hedging strategies. Recognizing that currency depreciation increases the cost for foreign buyers and reduces the value of foreign earnings for domestic companies, students learn to evaluate risk mitigation tools such as forward contracts and options.

Solution Approach:

- Analyze the company's exposure to currency fluctuations.
- Calculate potential gains or losses from currency movements.
- Consider hedging options to lock in current rates.
- Assess the project's viability given expected currency trends.

Practical Application:

Multinational firms regularly monitor currency forecasts and employ hedging to stabilize cash flows, making this problem highly relevant.

Problem 2: The Role of International Financial Institutions

Scenario:

Evaluate the role of the International Monetary Fund (IMF) and the World Bank in stabilizing the global financial environment and supporting developing economies.

Analysis:

This problem encourages understanding of how international institutions serve as lenders of last resort, provide technical assistance, and foster economic stability. Students explore the differences between the IMF's short-term financial support and the World Bank's focus on long-term development projects.

Solution Approach:

- Describe the functions and objectives of each institution.
- Analyze real-world case studies where these institutions intervened.
- Discuss criticisms and limitations of their roles.

Practical Application:

Knowing how these institutions operate is vital for financial managers engaging in international projects or advising governments on economic policies.

Problem 3: Risks in Multinational Finance

Scenario:

Identify and explain the main types of risks faced by multinational firms operating across different countries.

Analysis:

This problem emphasizes risk management principles by categorizing risks such as:

- Exchange rate risk
- Political risk
- Credit risk
- Liquidity risk
- Transaction risk

Students learn to analyze how these risks influence strategic decision-making and develop

mitigation strategies.

Solution Approach:

- Define each risk type with examples.
