Sample Questions from the June 13 Paper and Model Answers

To illustrate the types of questions and expected responses, here are sample questions along with brief model answers:

Sample Question 1: Short Answer

Question: Describe the role of the Golgi apparatus in cells.

Answer: The Golgi apparatus modifies, sorts, and packages proteins and lipids received from the endoplasmic reticulum. It is involved in processing molecules for secretion or for use within the cell and forms vesicles for transport.

Sample Question 2: Data Interpretation

Question: The graph shows the rate of photosynthesis at different light intensities. Describe the trend and explain why the rate plateaus at higher light intensities.

Answer: The graph indicates that as light intensity increases, the rate of photosynthesis also increases until it reaches a plateau. This occurs because, beyond a certain light intensity, other factors such as CO₂ concentration or temperature become limiting, preventing further increases in the rate.

Sample Question 3: Extended Response

Question: Explain the importance of genetic variation within a population for evolution.

Answer: Genetic variation provides a range of different alleles in a population, some of which may confer advantages in survival or reproduction. This variation allows natural selection to act upon these traits, leading to evolution over time as favorable traits become more common.
