Understanding Paddy Threshers and Dehuskers

What is a Paddy Thresher?

A paddy thresher is a machine used to separate rice grains from the stalks and husks after harvesting. The process of threshing involves loosening the grains from the straw, which traditionally was done manually by beaters or flails. Modern threshers automate this process, increasing efficiency and reducing grain damage.

Key functions of a paddy thresher include:

- Separating rice grains from stalks and husks
- Cleaning the grains by removing chaff, dust, and debris
- Preparing the grains for further processing or storage

Types of Paddy Threshers:

- Motorized Threshers: Powered by electric motors or gasoline engines, offering high capacity and automation.
- Manual Threshers: Hand-operated, suitable for small-scale or remote farms with limited access to power.
- Combined Threshers: Integrate threshing with other functions such as winnowing or cleaning.

What is a Dehusker?

A dehusker (also known as a rice huller or rice polisher) is a machine that removes the husk from rice grains. The husk, being the outer shell, is typically removed before rice is consumed or processed further. Dehuskers not only remove the husk but can also perform polishing to improve rice appearance, texture, and market value.

Primary functions of a dehusker include:

- Removing husks from paddy to produce brown rice
- Optional polishing for white rice
- Separating husk from rice grains efficiently

Types of Dehuskers:
