Common Questions and Their Answers in the Gizmo

Q1: How does pollinator attraction affect pollination?

Answer: Flowers attract pollinators through bright colors, scent, and nectar. Increased attractiveness leads to more visits, raising pollination chances. The Gizmo allows users to modify flower traits to see how attraction influences pollination success.

Q2: What is the difference between self-pollination and cross-pollination?

Answer:

- Self-pollination occurs when pollen from a flower fertilizes the same flower or another flower on the same plant.
- Cross-pollination involves pollen transfer between different plants, increasing genetic diversity.

The Gizmo demonstrates both processes and their implications for plant health.

Q3: How do environmental factors influence pollination?

Answer: Factors such as wind, rain, and temperature can enhance or hinder pollination. For example, rain may wash away pollen, while wind can aid in dispersing pollen over long distances. Users can manipulate these variables to see their effects.
