fuel is converted into heat. For example, a furnace with 96% AFUE is highly efficient.

- Capacity in BTUs: The heating capacity is often expressed in thousands of BTUs (British Thermal Units). For instance, a code like 36 may denote 36,000 BTUs.

Some common codes and their meanings include:

Code	Approximate Capacity	Notes
36	36,000 BTUs	Suitable for small to medium homes
60	60,000 BTUs	Larger homes or spaces
80+	80,000+ BTUs	Very large spaces or commercial use

Features Encoded in Model Numbers

Beyond basic capacity and efficiency, model numbers also encode features that affect operation, installation, and compatibility.

Multi-Stage and Modulating Heating

- Single-Stage Furnaces: Basic units with one level of heat output.
- Two-Stage Furnaces: Provide two levels of heating, improving comfort and efficiency.
- Modulating Furnaces: Vary the heat output continuously for optimal comfort and efficiency.

Model numbers might include indicators such as "M" for modulating systems or "2" for two-stage models.
