Logical reasoning questions with answers

Logical reasoning is an essential component of many competitive exams, recruitment processes, and academic assessments. These questions evaluate an individual's ability to analyze, interpret, and draw conclusions based on given information. Engaging with logical reasoning questions not only sharpens one's critical thinking skills but also enhances problem-solving capabilities. In this comprehensive guide, we will delve into various types of logical reasoning questions, providing detailed explanations and answers to help you master this crucial skill.

Understanding Logical Reasoning

Logical reasoning involves the process of using structured thinking to solve problems and make decisions based on the information provided. It tests your capacity to identify patterns, deduce relationships, and apply logical rules.

Importance of Logical Reasoning

- Develops analytical thinking
- Enhances problem-solving skills
- Prepares for competitive exams like CAT, GRE, SSC, and bank exams
- Improves decision-making abilities in real-life scenarios

Types of Logical Reasoning Questions

Logical reasoning questions come in various forms, each testing different aspects of reasoning skills.

1. Verbal Reasoning

These questions involve written information, such as statements, arguments, and conclusions.

2. Non-Verbal Reasoning

These questions involve visual or pattern-based puzzles, such as series, coding-decoding, and

arrangements.

3. Analytical Reasoning

Focused on complex problem-solving, often involving puzzles and logical sequences.

Common Types of Logical Reasoning Questions with Examples and Answers

1. Coding-Decoding

This type involves deciphering a code based on given rules to find the meaning or code of a word.

Example

If in a certain code, *BAT* is written as *DBU*, how will *CAT* be written in that code?

Solution

- Observe the pattern: B ? D, A ? B, T ? U
- B to D: move forward by 2 letters ($B + 2 = D$)
- A to B: move forward by 1 letter ($A + 1 = B$)
- T to U: move forward by 1 letter ($T + 1 = U$)

The pattern seems inconsistent at first glance, but notice the first letter shifts by +2, and the next two letters shift by +1.

Applying the same pattern to CAT:

- C (first letter): shift by +2 ? $C + 2 = E$
- A (second letter): shift by +1 ? $A + 1 = B$
- T (third letter): shift by +1 ? $T + 1 = U$

Answer: EBU

2. Series and Sequences

These questions involve identifying the pattern in a sequence of numbers or objects.

Example

What is the next number in the series: 2, 4, 8, 16, ____?

Solution

- The pattern is doubling each time: $2 \times 2 = 4$, $4 \times 2 = 8$, $8 \times 2 = 16$
- Next: $16 \times 2 = 32$

Answer: 32

3. Blood Relation

These questions test understanding of family relationships.

Example

Pointing to a man, a woman says, "He is the son of my father's only son." Who is the man to the woman?

Solution

- The woman's father's only son could be her brother or herself.
- Since she is speaking, "He is the son of my father's only son," and she refers to herself as the only daughter, the man is her son.

Answer: Her son

4. Direction Sense Test

These questions assess the sense of direction and spatial awareness.

Example

A person walks 5 km north, then turns right and walks 3 km, then turns left and walks 2 km. How far is he from the starting point?

Solution

- Walked 5 km north.
- Turned right: now facing east, walks 3 km.
- Turned left: facing north, walks 2 km.
- Total northward movement: $5 + 2 = 7$ km.
- Eastward movement: 3 km.

Distance from starting point:

- Using Pythagoras: $\sqrt{7^2 + 3^2} = \sqrt{49 + 9} = \sqrt{58} \approx 7.62$ km

Answer: Approximately 7.62 km

5. Puzzle ? Arrangement and Selection

These questions involve arranging objects or people based on given conditions.

Example

Five friends A, B, C, D, and E are sitting in a row. C is to the right of D but to the left of B. E is to the right of A. Who is sitting in the middle?

Solution

- C is to the right of D but left of B: $D \text{ ? } C \text{ ? } B$
- E is to the right of A: $A \text{ ? } E$
- Possible arrangement considering all clues:
- $D \text{ ? } C \text{ ? } B$
- A and E are to the right of A, and E is to the right of A.
- The arrangement could be: $D \text{ ? } C \text{ ? } B \text{ ? } A \text{ ? } E$

In this arrangement, B is in the middle.

Answer: B

Tips for Solving Logical Reasoning Questions Effectively

- Read the question carefully and understand all the given information.
- Identify the type of reasoning involved.

- Break down complex problems into smaller parts.
- Look for patterns, relationships, and clues.
- Use diagrams or charts for visual representation when necessary.
- Practice regularly to improve speed and accuracy.
- Avoid making assumptions beyond the given data.

Practice Questions with Solutions

To strengthen your reasoning skills, here are a few practice questions with detailed solutions.

Question 1

In a certain code, *FRUIT* is written as *GTJVS*. How will *VEGETABLE* be written in that code?

Answer & Explanation

- F ? G (+1)
- R ? T (+2)
- U ? J (-5)
- I ? V (+13)
- T ? S (-1)

The pattern seems inconsistent, but focusing on the first two letters:

- F to G: +1
- R to T: +2

Applying similar logic to *VEGETABLE*:

- V: +1 ? W
- E: +2 ? G

But since the pattern isn't consistent throughout, the key is recognizing the pattern as shifting each letter by a certain value, possibly following the sequence +1, +2, -5, +13, -1. Without a clear pattern, this question challenges the test-taker to identify the pattern or conclude that insufficient data exists.

Thus, this question emphasizes the importance of pattern recognition and logical deduction.

Question 2

If in a certain language, 'APPLE' is written as 'ELPPA', how will 'ORANGE' be written?

Answer & Explanation

- The pattern is reversing the word.
- 'APPLE' ? 'ELPPA' (reversed)
- Therefore, 'ORANGE' ? 'EGNARO'

Answer: EGNARO

Conclusion

Mastering logical reasoning questions requires consistent practice and a keen eye for patterns and relationships. By understanding different question types, practicing various problems, and applying effective strategies, you can significantly improve your logical reasoning skills. Remember, the key is to stay calm, analyze the available information critically, and approach each problem methodically. Whether preparing for competitive exams or enhancing your cognitive abilities, honing your logical reasoning skills will prove invaluable in numerous aspects of life. 1. Verbal Reasoning

These questions involve language-based puzzles, such as:

- Syllogisms: Deductive reasoning based on two or more statements.
- Logical Deduction: Drawing conclusions from given facts.
- Assumptions and Statements: Identifying implicit assumptions or evaluating the validity of statements.

Example:

All roses are flowers. Some flowers fade quickly. Therefore, some roses fade quickly.

Question: Is the conclusion valid?

Answer: No, because the premises do not establish that roses fade quickly; the conclusion is not necessarily true.

2. Non-Verbal Reasoning

These questions test visual and spatial reasoning skills through patterns, sequences, and diagrams.

Sample Logical Reasoning Questions with Answers

Let's examine some carefully selected questions, dissect their logic, and understand their solutions. This approach provides clarity and confidence to tackle similar problems independently.

Question 1: Syllogism

Statement:

All doctors are nurses. Some nurses are teachers.

Conclusion:

- All doctors are teachers.
- Some nurses are doctors.

Question: Which conclusion follows?

Options:

- a) Only 1 follows
- b) Only 2 follows
- c) Both 1 and 2 follow
- d) Neither follows

Answer:

Option b) Only 2 follows

Explanation:

- From "All doctors are nurses," we understand that the set of doctors is a subset of nurses.
- "Some nurses are teachers" indicates an intersection between nurses and teachers.
- Conclusion 1 ("All doctors are teachers") is invalid because the premises do not establish that all doctors are teachers.
- Conclusion 2 ("Some nurses are doctors") is valid because the first statement confirms that

doctors are a subset of nurses, so some nurses are indeed doctors.

Question 2: Pattern Recognition (Non-Verbal)

Question:

Observe the sequence of figures and identify the next figure:

[Imagine a sequence of geometric shapes changing in pattern.]

Options:

- a) A shape with a larger size
- b) A rotated shape
- c) A shape with a different color
- d) A shape with added elements

Answer:

(Based on the pattern observed in the sequence, the correct answer would be identified accordingly.)

Explanation:

Analyzing the sequence requires recognizing the pattern?such as rotation, size change, or addition of elements?and selecting the option that continues this pattern.

Question 3: Analytical Puzzle

Problem:

Five persons A, B, C, D, and E are sitting in a row. A is to the immediate right of B. C is sitting to the immediate left of D. E is sitting at the extreme right. Who is sitting in the middle?

Options:

- a) A

b) B

c) C

d) D

Answer:

Option c) C

Explanation:

- E is at the far right.
- A is immediately to the right of B.
- C is to the immediate left of D.
- Possible arrangement: B - A - C - D - E or B - A - D - C - E.
- The middle seat is occupied by C or D, depending on arrangement.

The most consistent arrangement placing C in the middle is B - A - C - D - E.
