XSS attacks inject malicious scripts into websites viewed by other users.

Method:

- Inject JavaScript code into input fields that are reflected or stored.
- When other users visit the compromised page, the script executes in their browsers.

Defense:

- Properly encode and sanitize all user inputs.
- Implement Content Security Policy (CSP).

3. Password Cracking with Rainbow Tables

Rainbow tables are precomputed hashes that help reverse hash functions to discover passwords.

How it's used:

- Attackers use tools like Ophcrack to compare hashes against rainbow tables.
- Effective against weakly hashed passwords.

Protection:

- Use strong hashing algorithms like bcrypt or Argon2.

- Salt hashes to prevent rainbow table attacks.
