Dryer Not Heating

Dryer Stops Mid-Cycle

Dryer Makes Unusual Noises

Dryer Takes Too Long to Dry

Each of these issues can stem from different causes, which we'll explore in detail.

Kenmore Elite Dryer Troubleshooting: Step-by-Step Solutions

Dryer Won't Start

When your Kenmore Elite dryer refuses to turn on, the problem might be electrical or component-related.

- **Check the Power Supply:** Ensure the dryer is plugged in securely and the outlet is functioning.

Test the outlet with another device or use a multimeter.

- **Inspect the Circuit Breaker:** Reset any tripped circuit breakers or replace blown fuses in your home's electrical panel.
- **Test the Door Switch:** The dryer won't start if the door switch isn't engaging. Open the door and press the switch manually with a multimeter to check for continuity.
- **Examine the Start Switch and Timer:** Faulty start switches or timer controls can prevent operation. Use a multimeter to test for continuity.
- **Verify the Control Board:** Malfunctioning electronic control boards may cause startup issues. Look for visible damage or burnt components, and consider professional diagnosis if needed.

Dryer Not Heating

Heating issues can leave your clothes damp or take too long to dry.

- **Check the Thermal Fuse:** A blown thermal fuse is a common cause. Locate it near the blower housing and test for continuity. Replace if necessary.
- **Inspect the Heating Element:** Burned-out heating coils will prevent heat. Visually examine the coils for breaks or breaks in the wire and test with a multimeter.
- **Examine the High-Limit Thermostat:** This part shuts off the heating element if it overheats. Test for continuity and replace if faulty.
- **Test the Cycling or Operating Thermostat:** Ensures proper temperature regulation. Replace if defective.
- **Check the Gas Supply (for Gas Dryers):** Ensure the gas valve is open and the gas supply is sufficient. If gas isn't reaching the burner, the dryer won't heat.

Dryer Stops Mid-Cycle

If your dryer suddenly stops during a cycle, it could be due to overheating or sensor issues.

- **Clean the Lint Filter and Vent:** Blockages restrict airflow, causing overheating. Regularly clean the lint filter and vent duct.
- **Inspect the Thermostats and Thermal Fuse:** Overheating triggers safety shut-offs. Test for continuity and replace as needed.
- **Examine the Moisture Sensor:** Located inside the drum, malfunctioning sensors can cause premature shutoff. Clean the sensors with a soft cloth and rubbing alcohol. Replace if defective.
- **Check for Overloading:** Overstuffed loads can cause the dryer to overheat and stop. Dry smaller loads for optimal performance.

Dryer Makes Unusual Noises

Noise can indicate various mechanical issues.

- **Inspect the Drum Rollers:** Worn or broken rollers cause squeaking or thumping sounds. Replace if they show signs of wear.
- **Check the Idler Pulley:** A faulty pulley can produce squeals. Lubricate or replace as needed.
- **Examine the Drum Belt:** A frayed or broken belt causes thumping sounds. Replace if damaged.
- **Look at the Motor:** A failing motor can produce humming or grinding noises. If suspected, professional diagnosis is recommended.

Dryer Takes Too Long to Dry

Extended drying times can be frustrating and energy-consuming.

- **Clean the Lint Filter and Vent System:** Blocked vents trap moisture and slow drying. Regular cleaning is essential.
- **Check the Heating Element:** A partially failed element won't produce enough heat. Test and replace if necessary.
- **Inspect the Moisture Sensor:** Dirty or malfunctioning sensors may misjudge moisture levels. Clean and test them.
- **Ensure Proper Load Size:** Overloading reduces airflow and drying efficiency. Dry smaller loads for better results.
- **Verify Airflow and Ventilation:** Ensure the ductwork isn't kinked or blocked. Improve airflow for faster drying.
