Subject: General Science

Q1: What is Newton's First Law of Motion?

Answer:

Newton's First Law of Motion states that an object at rest remains at rest, and an object in motion continues in uniform motion in a straight line unless acted upon by an external force. This law is also known as the law of inertia. It highlights the natural tendency of objects to resist changes in their state of motion, emphasizing the importance of forces in altering motion.

Q2: Explain the process of photosynthesis.

Answer:

Photosynthesis is the process by which green plants, algae, and some bacteria convert light energy into chemical energy stored in glucose molecules. It occurs primarily in the chloroplasts of plant cells, utilizing chlorophyll pigments. The overall simplified equation is:

This involves two main stages: the light-dependent reactions, where sunlight energizes electrons, producing ATP and NADPH; and the light-independent Calvin Cycle, where these molecules facilitate carbon fixation to synthesize glucose.
