Question What is Ohm's Law and its formula in electrical engineering? Ohm's Law states that the current flowing through a resistor is directly proportional to the voltage across it and inversely proportional to its resistance. The formula is $V = IR$, where V is voltage (Volts), I is current (Amperes), and R is resistance (Ohms). How is power calculated in electrical circuits? Power in electrical circuits is calculated using the formula $P = VI$, where P is power in Watts, V is voltage in Volts, and I is current in Amperes. Alternatively, using Ohm's Law, P can also be expressed as $P = I^2 R$ or $P = V^2 / R$. What is the formula for calculating the total resistance in series and parallel circuits? For series circuits, total resistance $R_{\text{total}} = R_1 + R_2 + R_3 + \dots$. For parallel circuits, $1 / R_{\text{total}} = 1 / R_1 + 1 / R_2 + 1 / R_3 + \dots$. What is the formula for calculating capacitance in a capacitor? Capacitance (C) is given by $C = Q / V$, where Q is the charge stored (Coulombs) and V is the voltage across the capacitor (Volts). How do you calculate the inductance in an RL circuit? The inductive reactance (X_L) in an RL circuit is calculated using $X_L = 2\pi fL$, where f is the frequency in

Hertz, and L is the inductance in Henrys. What is the formula for calculating the root mean square (RMS) value of an AC current? The RMS value of an AC current is given by $I_{rms} = I_{peak} / \sqrt{2}$, where I_{peak} is the maximum (peak) current.
