Understanding Location Aware QoS in NS2

What is Location Aware QoS?

Location-aware QoS refers to the ability of a network to adapt its service quality based on the geographical position of nodes within the network. Unlike traditional QoS mechanisms that focus solely on bandwidth, latency, jitter, and packet loss, location-aware QoS considers spatial information to optimize routing, resource allocation, and service delivery. This approach is especially valuable in mobile ad hoc networks (MANETs), vehicular ad hoc networks (VANETs), and sensor networks where node mobility and position directly impact network performance.

Why Incorporate Location Awareness in NS2 Simulations?
