Understanding the Fundamentals of Hair Colouring

Historical Perspective and Evolution

The art of hair colouring has evolved significantly over centuries, from ancient dyeing methods to modern chemical formulations. Traditional practices involved natural ingredients like henna, indigo, and plant-based dyes, while contemporary techniques utilize advanced chemical products to achieve a broad spectrum of shades and effects. Recognizing this evolution helps hairdressers appreciate the depth of their craft and adapt to new innovations.

Basic Hair Colour Theory

A solid grasp of colour theory is foundational for any hairdresser specializing in colouring. Key concepts include:

- **Primary Colours:** Red, blue, and yellow ? the building blocks of all other colours.
- **Secondary Colours:** Orange, green, and violet ? created by mixing primary colours.
- **Complementary Colours:** Colours opposite each other on the colour wheel that neutralize each other, used to correct unwanted tones.
- **Undertones:** Subtle hues beneath the hair?s surface that influence the final colour.

Understanding these elements enables colourists to predict how colours will interact and result in desired outcomes.

Hair Structure and Composition

Knowledge of hair anatomy informs effective colouring:

- **Cuticle:** The outer layer that affects porosity and colour absorption.
- **Cortex:** The layer containing melanin and responsible for hair colour.
- **Medulla:** The innermost layer, often less relevant in colouring but important in understanding hair strength.

Proper assessment of hair structure guides decisions on lifting, depositing, and avoiding damage.
