A typical USP 23 Monograph is organized into several key sections, each serving a specific purpose:

- Description

Provides a physical description of the drug substance or product, including appearance, color, odor,

and other distinctive features. For example, a monograph for aspirin might describe it as a white, crystalline powder.

- Identification Tests

A set of qualitative tests to verify the identity of the substance. These may include:

- Color tests
- Infrared (IR) absorption spectra
- Chromatographic identification

The goal is to ensure that the compound is correctly identified and free from similar-looking substances.

- Assay

Quantitative measurement of the active pharmaceutical ingredient (API). Usually performed using validated methods like high-performance liquid chromatography (HPLC), titration, or spectrophotometry. The assay results must fall within specified limits, often expressed as a percentage of the labeled amount.

- Impurities and Limits

Defines acceptable levels for impurities, degradation products, and residual solvents. This section ensures safety by limiting potentially harmful contaminants.

- Physical and Chemical Properties

Includes tests for:

- Melting point
- pH
- Solubility
- Specific rotation (for chiral compounds)
- Loss on drying

These parameters help confirm the quality and stability of the substance.

- Storage and Handling

Provides guidance on storage conditions, such as temperature, humidity, and protection from light, to preserve the drug's efficacy.
