Question How can I troubleshoot VMware vSphere ESXi host connectivity issues? Start by verifying network configurations, checking physical connections, and ensuring the VMkernel ports are correctly configured. Use vSphere Client or SSH to ping the host and check network adapters, and review logs for any errors related to network connectivity. What are common reasons for VM performance issues in VMware, and how can I troubleshoot them? Common reasons include resource contention, misconfigured settings, or hardware limitations. Troubleshoot by monitoring CPU, memory, and disk usage via vSphere Performance Charts, checking for VM snapshot issues, and ensuring resource allocation is appropriate for workloads. How do I resolve VM snapshot issues in VMware? Issues often arise from large snapshots or snapshot chains. To resolve, consolidate snapshots through the vSphere Client, ensure sufficient storage space, and avoid keeping snapshots for extended periods. If consolidation fails, check for underlying disk issues and consider manually consolidating via CLI. What steps should I take when a VMware VM is stuck in a 'not responding' state? First, try to gracefully restart the VM. If unresponsive, use vSphere Client to reset or power off the VM. Investigate host logs for underlying issues, check for VM resource constraints, and verify network connectivity. As a last resort, consider unregistering and re-registering the VM. How can I troubleshoot storage connectivity problems in VMware environments? Verify storage array health, check network configurations between hosts and storage, and ensure VMFS/datastore accessibility. Use vSphere Storage APIs and logs to identify errors, and test connectivity with tools like vmkping or storage vendor utilities. What tools can I use to troubleshoot VMware vSphere issues? Utilize vSphere Web Client, vSphere CLI, esxtop, vRealize Operations Manager, and VMware Log Insight. These tools help monitor performance, analyze logs, and diagnose hardware or configuration issues effectively. How do I fix VMware host CPU or memory overcommitment problems?
