$$P_1 + \frac{1}{2} \rho V_1^2 + \rho g h_1 = P_2 + \frac{1}{2} \rho V_2^2 + \rho g h_2$$

3. Head Losses and Friction

- Real flows experience energy losses due to friction, fittings, and bends.
- Head loss often calculated using Darcy-Weisbach or Hazen-Williams equations.

4. Dimensionless Parameters

- Viscosity (μ): A measure of a fluid's internal resistance to flow, affecting laminar and turbulent flow regimes.
- Pressure (P): The force exerted per unit area by a fluid, essential in understanding force transmission within fluid systems.
- Velocity (V): The speed and direction of fluid particles, integral to flow analysis.
- Flow rate (Q): The volume of fluid passing through a cross-section per unit time, typically in m^3/s .
- Reynolds Number (Re): A dimensionless parameter that predicts flow patterns—laminar or turbulent—based on fluid properties and flow conditions.

Governing Principles and Equations

The analysis of fluid systems relies heavily on fundamental equations:

- Continuity Equation: Based on the conservation of mass, it states that for incompressible flows, the mass flow rate remains constant along a streamline:

$$A_1 V_1 = A_2 V_2$$

where A is the cross-sectional area, and V is the flow velocity.

- Bernoulli's Equation: Represents the conservation of energy along a streamline, linking pressure, velocity, and elevation:

$$P + \frac{1}{2} \rho V^2 + \rho g h = \text{constant}$$

It's fundamental for analyzing ideal flows but requires modifications for real, viscous fluids.

- Navier-Stokes Equations: These are the most comprehensive mathematical descriptions of fluid motion, accounting for viscosity and external forces. They are complex but essential for detailed fluid flow modeling.

Flow Regimes and Phenomena

Understanding flow regimes is critical for designing efficient systems:

- Laminar Flow: Smooth, orderly flow characterized by parallel streamlines. Dominant at low Reynolds numbers ($Re < 2300$)
- Turbulent Flow: Chaotic, mixing flow with eddies and vortices, occurring at high Reynolds ($Re > 2300$)
