This method allowed for precise placement on the Gale Crater, a site chosen for its geological diversity and potential for past water activity.

Landing Site Selection: Gale Crater

Gale Crater was selected based on orbital imagery revealing layered sedimentary rocks, which could harbor clues about Mars' climatic history. The central mountain within the crater, Mount Sharp, presented an accessible stratigraphy for studying the planet's environmental evolution over billions of years.

Scientific Instruments and Capabilities

Curiosity carried an array of instruments, each designed to analyze different aspects of the Martian environment:

- Sample Analysis at Mars (SAM): A suite of instruments to analyze gases and organic molecules.
- Chemistry and Mineralogy (CheMin): X-ray diffraction to identify mineral compositions.
