Characteristics of Plasma:

- **Quasi-neutrality:** The overall charge in a plasma tends to be neutral because the number of positive ions balances the number of electrons.
- **Collective Behavior:** Long-range electromagnetic interactions dominate, leading to phenomena like waves and instabilities.
- **High Conductivity:** Plasmas are excellent conductors of electricity due to free charges.
- **Response to Magnetic Fields:** Their charged particles respond strongly to magnetic fields, enabling confinement and control in applications like fusion reactors.

Historical Background and Significance

The study of plasma physics gained momentum in the early 20th century with advancements in understanding electromagnetic phenomena and the discovery of cosmic plasmas. The development of controlled nuclear fusion research, space exploration, and plasma-based technologies has increased the importance of fundamental plasma physics.
