Key Components in the Nissan Pulsar Engine Diagram

Cylinder Block

The core of the engine, the cylinder block houses the cylinders and serves as the foundation for

most internal components. Made from cast iron or aluminum alloy, it contains:

- Cylinders: Where combustion occurs.
- Cooling passages: To regulate engine temperature.
- Main bearing caps: Support the crankshaft.

Pistons and Connecting Rods

- Pistons: Move up and down within the cylinders, converting combustion energy into mechanical motion.
- Connecting rods: Link the pistons to the crankshaft, transmitting force.

Crankshaft

The crankshaft converts the reciprocating motion of the pistons into rotational motion. It is supported by main bearings within the engine block and connected to the transmission via the flywheel.

Cylinder Head

Mounted atop the cylinder block, the cylinder head contains vital components such as:

- Valves (intake and exhaust)
- Camshaft(s)
- Spark plugs

The head seals the combustion chamber and allows air-fuel mixture intake and exhaust gases escape.

Valvetrain Components

- Camshaft(s): Operate the valves via lobes.
