Among the pioneers leveraging bamboo's potential is Simon Velez, whose groundbreaking work demonstrates how natural materials can be transformed into artful, resilient structures.

Who is Simon Velez? An Architect of Bamboo Innovation

Background and Philosophy

Simon Velez, born in Colombia in 1949, has carved a niche in the world of sustainable architecture by focusing on bamboo as a primary building material. His philosophy emphasizes harmony with nature, cultural authenticity, and the empowerment of local communities through participatory design.

Having studied architecture at the University of La Salle in Bogotá, Velez traveled extensively, seeking traditional building techniques and materials. His exposure to indigenous construction methods in Colombia and beyond deeply influenced his approach—merging craftsmanship with scientific understanding to elevate bamboo from a simple building material to a sophisticated

architectural medium.

Major Contributions and Notable Projects

Velez's portfolio includes iconic structures such as:

- Casa de Bambú (Bamboo House): A self-sustaining residence demonstrating bamboo's structural capabilities.
- Casa de la Naturaleza: An eco-lodge exemplifying sustainable tourism infrastructure.
- Bamboo Pavilion at Expo 2010 in Shanghai: Showcasing bamboo's global potential.

His work is characterized by innovative structural systems, elegant aesthetics, and a focus on durability and safety, dispelling myths that bamboo is only suitable for temporary or low-cost structures.

Grow Your Own House Concept: Empowering Communities

The idea of grow your own house revolves around empowering individuals and communities to participate actively in their housing solutions. It emphasizes local resource utilization, skill development, and environmental stewardship.

Key Principles of Grow Your Own House

- Local Material Use: Leveraging indigenous resources like bamboo, clay, or timber.
