Sample Key Topics and How Thinkwell Answers Address Them

A. Aggregate Demand and Supply

Question Example:

- Changes in consumer confidence
- Changes in fiscal policy (taxes and government spending)
- Changes in monetary policy (interest rates)

A shift in aggregate demand results from factors affecting overall spending in the economy, not just a movement along the curve caused by price level changes.

B. Fiscal Policy Tools

Question Example:

How does an increase in government spending affect aggregate demand?

Thinkwell Answer Summary:

An increase in government spending directly raises aggregate demand because government expenditure is a component of AD. This can lead to higher output and possibly higher price levels, depending on the economy's position.

Key Point:

The answer emphasizes the multiplier effect and the importance of fiscal policy in stimulating economic activity.

C. The Phillips Curve

Question Example:

What is the trade-off depicted by the Phillips Curve?

Typical Thinkwell Answer:
