- Head and neck cancers
- Severe swallowing disorders
- Prolonged inability to eat orally
- Esophageal or gastric obstructions

Key Aspects of Nursing Care for PEG Tubes

- Maintenance of tube patency
- Prevention of infection at insertion site
- Proper feeding techniques
- Monitoring for complications
- Patient comfort and education

Importance of Narrative Nursing Notes on PEG TUBs

Narrative notes serve as a detailed account of patient interactions, assessments, interventions, and responses related to PEG tubes. They help in:

- Documenting clinical findings
- Communicating with the healthcare team
- Supporting quality improvement initiatives
- Providing legal evidence of care provided
- Tracking patient progress over time

Effective narrative notes should be thorough, objective, and clear, offering enough detail for future reference.

Examples of Narrative Nursing Notes on PEG TUB Care

1. Routine Assessment and Maintenance

Date: MM/DD/YYYY

Patient's PEG site was inspected today during routine check. The insertion site appeared clean, with no signs of redness, swelling, or drainage. The stoma was stable, and the surrounding skin was intact. The dressing was clean and dry. The tube was secured properly to prevent accidental dislodgement. Patient tolerated the assessment well and reported no pain or discomfort during the inspection.

Interventions included gentle cleaning of the site with sterile saline, ensuring the securement device was snug but not constrictive, and reinforcing patient and caregiver education on daily site care.

2. Identifying and Managing Complications

Date: MM/DD/YYYY

During morning assessment, the patient exhibited slight redness and warmth around the PEG insertion site, with minimal serous drainage noted. The patient reported mild discomfort but no significant pain. No signs of purulent drainage or foul odor were present.

Assessment suggests early signs of localized infection. Nursing intervention included cleaning the site with antiseptic solution, applying a sterile dressing, and notifying the healthcare provider for further evaluation. The patient was advised to observe for increased redness, swelling, or drainage

and to report any worsening symptoms.

3. Troubleshooting Feeding Issues

Date: MM/DD/YYYY

Patient was receiving enteral feeding via PEG tube this morning. Noted that the feeding pump alarmed indicating occlusion. On inspection, the tube was found to be clamped or kinked. The nurse gently unclamped the tube and flushed it with 30 mL of warm water, restoring patency. The patient tolerated the feeding without complications.

Patient education was reinforced regarding proper feeding administration, avoiding excessive tension on the tube, and reporting any blockage or discomfort promptly.

4. Documentation of Patient Education

Date: MM/DD/YYYY

Provided comprehensive education to the patient and caregiver regarding PEG tube care, including signs of infection, proper cleaning techniques, and when to seek medical attention. Demonstrated dressing change and explained the importance of maintaining hygiene around the stoma. The patient expressed understanding and verbalized confidence in managing the PEG at home.

5. Post-Procedure or Post-Intervention Notes

Date: MM/DD/YYYY

Post-PEG insertion, the patient was monitored closely for signs of bleeding, pain, or infection. No adverse events noted. The insertion site was clean, dry, and without bleeding. Patient tolerated the procedure well and was scheduled for follow-up in 24 hours for site assessment.

Tips for Writing Effective Narrative Nursing Notes on PEG TUBS

- Be Specific and Descriptive: Include details about the appearance of the site, patient responses, and interventions performed.
- Use Objective Language: Focus on factual observations rather than assumptions.
- Include Time and Date: Clearly specify when assessments and interventions occurred.
- Document Patient Responses: Note any complaints, pain levels, or changes in condition.
- Record Interventions Clearly: Describe what was done, how it was done, and the outcome.
- Communicate Changes Promptly: If any abnormalities or complications arise, document

immediately and notify relevant team members.

- Maintain Confidentiality: Ensure notes are stored securely and adhere to privacy policies.

Common Challenges and How to Document Them

Infection at the Insertion Site

Example Narrative:

On MM/DD/YYYY at 0900, upon inspection, redness and mild edema noted around the PEG insertion site, with minimal serous drainage. No foul odor detected. Patient reports slight tenderness. Intervention included cleaning with antiseptic solution, applying sterile dressing, and notifying the physician for potential antibiotic therapy. Patient educated on signs of worsening infection.

Tube Dislodgement

Example Narrative:

Patient's PEG tube was found to be partially dislodged upon morning assessment. The tube was loose but still in the stoma. Immediate action included stabilizing the tube, preventing further dislodgement, and notifying the surgical team. The patient was instructed to avoid pulling or tugging on the tube and to report any pain or difficulty with feeding.

Blockage or Occlusion

Example Narrative:

During feeding, the pump alarmed indicating occlusion. The nurse attempted flushing the tube with warm water, which was unsuccessful initially. The tube was gently massaged, and further flushing was performed successfully. The patient remained comfortable, and the incident was documented with follow-up instructions provided.

Conclusion

Narrative nursing notes examples on PEG tubes serve as vital documentation tools that support high-quality, patient-centered care. They provide detailed accounts of assessments, interventions, patient responses, and education related to PEG tube management. By following structured and detailed documentation practices, nurses can enhance communication within the care team, facilitate early detection of complications, and ensure legal accountability. - Legal Record: Serves as a legal document reflecting nursing actions and observations.
- Communication: Facilitates interdisciplinary collaboration by providing detailed clinical insights.
- Quality Improvement: Helps identify recurring issues or complications, informing better practices.

Core Components of Effective Narrative Nursing Notes on PEG Tubes

When writing narrative notes, include these key elements:

- Patient Identification and Date/Time: Always start with clear identification and timestamp.
- Assessment of the Site: Skin integrity, signs of infection, granulation tissue, or dislodgement.
- Tube Condition: Position, patency, securement, and any leakage.

- Patient's Response: Comfort, pain, nausea, or other complaints.
- Interventions Performed: Flushing, dressing changes, repositioning, or troubleshooting.
- Patient Education: Instructions given, understanding, and compliance.
- Follow-up Plans: Monitoring, upcoming assessments, or referrals.

Example 1: Routine Post-Procedure Documentation

Date/Time: 2024-04-26 09:30 AM

Patient: John Doe, 65-year-old male

Narrative:

Upon assessment this morning, the PEG tube site appears clean and dry with no signs of redness, swelling, or discharge. The surrounding skin is intact, with no evidence of irritation or infection. The tube is secure and appears properly positioned without any visible displacement. The patient reports mild discomfort when coughing but denies pain, nausea, or vomiting.

I flushed the PEG tube with 30 mL of sterile water using a gentle push-pause technique, noting no resistance or leakage. The patient tolerated the procedure well and verbalized understanding of the importance of keeping the site clean. I reinforced instructions on daily site care and signs of infection, emphasizing to report increased redness, swelling, or discharge immediately.

Plan: Continue routine site assessment every shift, monitor for any changes, and educate the patient on maintenance.

Example 2: Documenting a Complication ? Signs of Infection

Date/Time: 2024-04-26 2:15 PM

Patient: Jane Smith, 58-year-old female

Narrative:

During routine assessment, I observed redness and swelling around the PEG tube insertion site, approximately 2 cm in diameter. There is a small amount of purulent, foul-smelling discharge present. The skin surrounding the site is warm to touch, and the patient reports mild tenderness and discomfort. No systemic signs of infection such as fever or chills are noted at this time.

The PEG tube appears secure, with no visible dislodgement. I documented the findings and notified the physician for further evaluation. I removed the old dressing, cleaned the area with sterile saline,

and applied a clean, dry dressing. Antibiotic ointment was not applied without physician order.

Patient education included the importance of reporting increased redness, swelling, or discharge, and I scheduled a follow-up to monitor for progression of infection.

Follow-up plan: Monitor site closely, ensure proper hygiene, and adhere to prescribed antibiotic therapy if initiated.

Example 3: Troubleshooting Dislodgement or Displacement

Date/Time: 2024-04-27 08:45 AM

Patient: Robert Lee, 72-year-old male

Narrative:

This morning, upon assessment, I noted that the PEG tube appears slightly dislodged, with the external bumper sitting higher than usual and the internal bumper not visible. The patient reports mild nausea and discomfort in the abdomen. No visible leakage from the site, but there is a small amount of clear gastric fluid around the tube.

I gently stabilized the tube to prevent further movement and checked for patency by aspirating a small amount of gastric contents, which was clear and minimal. I reassessed the site for signs of trauma or bleeding; none were present. I immediately notified the physician for potential repositioning or replacement.

Patient education included explaining the importance of not manipulating the tube independently and reporting any changes in tube position or discomfort. I documented the findings and actions taken thoroughly.

Follow-up plan: Await physician instructions for repositioning, continue monitoring for signs of leakage, and ensure patient comfort.

Example 4: Managing Feeding and Hydration

Date/Time: 2024-04-27 11:00 AM

Patient: Linda Green, 60-year-old female

Narrative:

The patient received her scheduled enteral feeding via PEG tube this morning. The feeding was prepared according to prescribed formula and rate. I verified placement by aspirating gastric contents (30 mL, clear, slightly cloudy), which was within expected volume. No residual volume was noted. The patient tolerated the feeding well, with no reported discomfort or nausea.

Throughout the feeding, the patient remained comfortable and alert. I monitored for signs of aspiration, such as coughing or choking, and observed no abnormalities. Hydration status appears adequate, with moist mucous membranes and normal urine output.

I documented the feeding procedure, the amount administered, and the patient's response. Reinforced the importance of maintaining hydration and adhering to feeding schedules.

Follow-up: Continue to monitor for tolerance, residual volumes, and any adverse symptoms during future feedings.

Example 5: Patient Education and Discharge Instructions

Date/Time: 2024-04-28 3:00 PM

Patient: Mark Johnson, 55-year-old male

Narrative:

Today, I provided comprehensive education to Mr. Johnson regarding PEG tube care in preparation for discharge. I demonstrated proper cleaning techniques, including daily site cleaning with sterile saline, and instructed him on how to check for signs of infection such as redness, swelling, or foul odor.

I reviewed the importance of securing the tube properly to prevent dislodgement and instructed on safe feeding practices, including flushing before and after feedings with sterile water and avoiding excessive tugging on the tube. The patient demonstrated understanding and expressed confidence in managing his PEG site.

I also discussed the importance of maintaining hydration, recognizing signs of complications, and when to seek immediate medical attention. Printed educational materials were provided for reference.
