### The Brake System Diagram of a 2006 Hyundai Sonata

While a visual diagram is invaluable, here's a detailed verbal walkthrough of the brake system layout:

#### Front Brakes

- The rotor is mounted on the wheel hub.
- The caliper straddles the rotor, with caliper pistons inside.
- When the brake pedal is pressed, hydraulic pressure forces the caliper pistons outward.
- The brake pads attached to the caliper then clamp onto the rotor, creating friction that slows the wheel.
- The brake wear sensor is embedded in the pads, alerting when replacement is necessary.

#### Rear Brakes

- The brake drum is attached to the wheel hub.
- Inside the drum, brake shoes are positioned against the inner surface.
- When braking, hydraulic pressure from the wheel cylinders pushes the shoes outward.
- The return springs retract the shoes after releasing the brake pedal.

### Hydraulic Pathway

- Pressing the brake pedal pushes the master cylinder piston, creating hydraulic pressure.
- Brake fluid flows through brake lines to the calipers (front) and wheel cylinders (rear).
- The ABS module monitors wheel speed sensors and modulates hydraulic pressure during emergency stops.

### Step-by-Step Operation of the Brake System

Understanding the operation of the brake system involves following the flow from driver input to wheel deceleration:

- Driver presses the brake pedal, exerting force on the master cylinder.
- The master cylinder converts this force into hydraulic pressure via brake fluid.
- Hydraulic pressure travels through brake lines and hoses to the front calipers and rear wheel cylinders.
- The calipers and wheel cylinders respond by pushing brake pads and brake shoes outward.
- Friction between these components and the rotors/drums slows the rotation of the wheels.
- As the vehicle decelerates, the driver releases the brake pedal, causing the return springs to retract the shoes and calipers to release the rotor.
- The ABS system activates if wheel slip is detected, pulsing brake pressure to maintain stability.

### Maintenance and Troubleshooting Tips Based on the Diagram

Understanding the diagram of brakes on a 2006 Hyundai Sonata can help in diagnosing common brake issues:

- Squealing or grinding noises: Check brake pads and shoes for wear; replace if necessary.
