What is din 332 1?

Definition and Purpose

din 332 1 is a German industrial standard that specifies the dimensions, tolerances, and mechanical properties of metric bolts, screws, and threaded fasteners. Published by the Deutsches Institut für Normung (DIN), it aims to ensure consistency, safety, and interchangeability of fasteners used in machinery, construction, automotive, and other mechanical assemblies.

This standard primarily covers metric coarse and fine thread fasteners with specific thread diameters, lengths, and strengths, making it crucial for manufacturers and engineers who require precise and reliable fastening solutions.

Scope and Applications

The scope of din 332 1 includes:

- Threaded bolts and screws with metric dimensions
- Various mechanical properties such as tensile strength and proof load
- Specific head types, including hexagon, countersunk, and socket heads

Applications span across:

- Industrial machinery assembly
- Automotive manufacturing and repair
- Construction projects requiring standardized fastening components

- Electronics and appliance manufacturing

Adherence to din 332 1 ensures that fasteners are compatible, reliable, and meet safety standards required in critical applications.

Key Specifications of din 332 1

Thread Types and Dimensions

din 332 1 primarily specifies metric threads, which are classified as:

- Coarse threads (standard classification)
- Fine threads (for specialized applications requiring higher tensile strength)

The standard details:

- Thread diameters ranging from M1.6 to M36 and larger
- Thread pitch values, such as 0.35 mm for M1.6, up to 3 mm for M36
- Length tolerances aligned with ISO metric thread standards

These dimensions ensure compatibility across different components and facilitate precise manufacturing.

Mechanical Properties and Strength Classes

din 332 1 categorizes fasteners based on their mechanical strength, mainly:

- Property classes like 8.8, 10.9, and 12.9, indicating specific tensile strength and yield strength
- Proof load values, which define the maximum load a fastener can withstand without permanent deformation
- Material specifications, typically medium carbon steel or alloy steel, heat-treated for specific strength classes

For example, a bolt classified as 8.8 has a minimum tensile strength of 800 MPa, making it suitable for most general-purpose applications, while 12.9 bolts are used in high-stress environments.

Head Types and Drive Styles

din 332 1 also specifies various head types to suit different assembly needs:

- Hexagon heads for wrench tightening
- Countersunk heads for flush finishes
- Socket heads for internal drive systems

Drive styles include:

- Hexagon drive (Allen or socket head)
- Slotted or Phillips for specific applications

The choice of head type and drive influences the fastener's application, torque requirements, and aesthetic considerations.

Material and Surface Coatings

Materials Used in din 332 1 Fasteners
