Tecumseh Tvm 220 Governor Adjust

Tecumseh TVM 220 Governor Adjust

The Tecumseh TVM 220 is a reliable and widely used small engine commonly found in lawn mowers, snow blowers, and other outdoor power equipment. A crucial component of this engine's operation is the governor system, which regulates engine speed by adjusting throttle control based on load conditions. Properly adjusting the Tecumseh TVM 220 governor ensures optimal engine performance, fuel efficiency, and longevity. If you notice issues such as inconsistent engine speeds, stalling under load, or the engine running too fast or too slow, a governor adjustment might be necessary. This guide provides a detailed overview of Tecumseh TVM 220 governor adjustment, covering everything from understanding the governor's function to step-by-step procedures for fine-tuning it.

Understanding the Tecumseh TVM 220 Governor System

What is a Governor?

A governor in small engines like the Tecumseh TVM 220 is a mechanical or electronic device that automatically maintains a consistent engine speed regardless of load variations. It does this by adjusting the throttle linkage to either increase or decrease fuel intake.

How Does the Governor Work?

The Tecumseh TVM 220 employs a mechanical governor system, typically consisting of:

- Governor Spring: Provides tension to regulate governor movement.
- Governor Arm: Connects the governor to the throttle linkage.
- Governor Weights: Located inside the governor, these weights respond to engine speed changes.
- Throttle Linkage: Connects the governor to the carburetor throttle.

When engine load increases, the governor weights move outward due to centrifugal force, causing the governor arm to shift and open the throttle slightly, increasing fuel flow. Conversely, when the load decreases, the spring pulls the governor arm back, reducing throttle and engine speed.

Signs That the Governor Needs Adjustment

Before attempting adjustments, confirm that the governor is the source of issues. Common signs include:

- Engine runs at inconsistent speeds.
- The engine surges or fluctuates under load.
- The engine overspeeds or underspeeds despite normal operation.
- The engine stalls during heavy load.

In some cases, problems may stem from issues other than the governor, such as carburetor problems or worn parts. Always perform a thorough inspection first.

Tools and Parts Required for Governor Adjustment

Essential Tools

- Screwdriver set (flat and Phillips head)
- Wrench set
- Pliers
- Tachometer (optional but recommended for precise measurement)
- Owner's manual for specific model details

Replacement Parts (if needed)

- Governor spring (if damaged or worn)
- Governor arm or linkage components
- Carburetor rebuild kit (if carb issues coexist)

Step-by-Step Guide to Adjusting the Tecumseh TVM 220 Governor

Step 1: Safety Precautions

- Ensure the engine is turned off and cooled down.
- Disconnect the spark plug wire to prevent accidental starting.
- Work in a well-ventilated area with appropriate safety gear.

Step 2: Access the Governor Components

- Remove the engine cover or shroud to expose the governor assembly. This may involve unscrewing a few bolts.
- Locate the governor arm, spring, and linkage connected to the carburetor.

Step 3: Check the Governor Spring and Linkage

- Inspect the governor spring for signs of wear, stretching, or damage.
- Ensure the linkage moves freely without binding.
- Confirm that the governor arm moves smoothly when manually moved.

Step 4: Set the Engine to Idle Speed

- Reconnect the spark plug wire.
- Start the engine and allow it to warm up.

- Adjust the throttle to the lowest speed setting.

Step 5: Adjust the Governor Spring Tension

- Locate the governor spring attachment point on the carburetor or governor arm.
- Usually, there is an adjustment screw or a clip that can be moved to change tension.

To increase engine speed:

- Slightly tighten the spring or move the attachment point to increase tension.
- Turn clockwise if the adjustment involves a screw.

To decrease engine speed:

- Loosen the spring or move the attachment point to reduce tension.
- Turn counterclockwise if applicable.

Step 6: Fine-Tune the Governor

- With the engine running at idle, gently move the governor arm by hand.
- The engine speed should attempt to maintain a constant RPM.
- Adjust the spring tension until the engine maintains a steady speed without surging.

Step 7: Set the High-Speed Governor Adjustment

- Increase the throttle to wide-open throttle (WOT).
- Observe engine behavior; it should reach maximum safe RPM specified in the manual.
- If the engine overspeeds, reduce tension on the governor spring.
- If it underspeeds, increase tension.

Step 8: Verify and Test

- Reconnect all removed parts and covers.
- Start the engine and observe operation under varying loads.
- Use a tachometer to measure engine RPM, ensuring it stays within the recommended range

(typically around 3,600 to 3,800 RPM for many Tecumseh engines).

Common Troubleshooting and Tips

If the Governor Is Not Responding

- Check for dirt, debris, or corrosion in the governor linkage.
- Replace worn or damaged governor spring or arm.
- Ensure the carburetor is clean and functioning properly.

Ensuring Proper Adjustment

- Make small adjustments incrementally.
- Always double-check engine RPM after each adjustment.
- Consult the Tecumseh engine manual for specific RPM ranges.

Preventative Maintenance

- Regularly inspect governor components.
- Keep the governor linkage lubricated and free of dirt.
- Replace worn or damaged parts promptly.

Additional Considerations

Differences Between Mechanical and Electronic Governors
