Overview

Safety and control heavily depend on the brake system, which holds the load when the winch is stationary or during slack cable conditions.

Types of Brakes

- Friction Brake: Uses brake shoes pressing against a drum or disc.
- Band Brake: A continuous band tightens around a drum to halt movement.
- Mechanical or Hydraulic: Depending on the model, brakes may be activated manually or

hydraulically.

Key Parts

- Brake Shoes or Bands: Contact surfaces that generate friction.
- Brake Springs: Maintain tension on the brake components.
- Brake Drum: Engages with brake shoes to halt rotation.
- Actuator Mechanism: Applies the brake (manual lever or hydraulic system).

Maintenance & Common Problems

- Brake Drag: Worn brake shoes or contaminated surfaces can cause constant friction.
- Failure to Engage: Damaged actuators or springs may prevent the brake from locking.
- Inspection & Replacement: Regularly check for wear, replace brake shoes, and adjust tension for optimal performance.

- The Motor Assembly

Overview

The motor supplies the mechanical power needed to turn the gear train and drum. Gearmatic 19 models often used electric or hydraulic motors, depending on the application.

Main Parts

- Motor Housing: Protects internal components.
- Armature & Stator: Generate electromagnetic force (electric motor).
- Hydraulic Pump/Motor: For units utilizing hydraulic power.
