Sample Exam Questions and Expert-Approved Answers

Below, we explore some typical question types and provide detailed, model answers aligned with the expectations of the Ashi Instructor Development Course.

1. Multiple Choice Question Example

Question: Which of the following is a contraindication for Ashi massage?

- a) Open wounds
- b) Muscle soreness
- c) Stress reduction
- d) Improved circulation

Expert Answer:

Correct Answer: a) Open wounds

Explanation: Open wounds are a contraindication because applying pressure or massage techniques could exacerbate injury or cause infection. Other options like muscle soreness and stress are generally indications or benefits, not contraindications.

2. Short Answer Question Example

Question: Describe the proper technique for applying pressure during Ashi massage.

Expert Answer:

Applying pressure during Ashi massage involves using the fingers, thumbs, or palms to exert steady, controlled pressure on specific acupressure points or muscle areas. The practitioner should maintain a comfortable, firm pressure that is sufficient to stimulate the point without causing discomfort to the client. The pressure should be applied gradually, held for a few seconds, then released slowly. Techniques like kneading, circular movements, or sustained pressure can be used, depending on the targeted area and client response. Maintaining proper body alignment and using body weight rather than just hand strength ensures effective and sustainable pressure application.

3. Practical Technique Assessment

Question: Demonstrate the correct technique for performing a basic Ashi massage stroke on the lower back.

Expert Guidance:

- Position the client comfortably on the massage table, ensuring access to the lower back.
- Use your thumbs or knuckles, applying gentle initial pressure to identify tender or sore spots.
- Gradually increase pressure to a comfortable yet firm level, using circular or linear strokes along the muscle fibers.
- Use your body weight to prevent fatigue and ensure consistent pressure.
- Maintain steady, rhythmic movements, observing the client's reactions and adjusting pressure

accordingly.

- Finish with gentle effleurage to soothe the area.

Preparing for the Teaching Component

A key part of the instructor course is demonstrating your ability to teach others. Here's how to prepare effective answers and demonstrations:

Lesson Planning Tips

- Start with clear learning objectives.
- Break down techniques into step-by-step instructions.
- Include safety instructions and contraindication awareness.
- Incorporate visual aids or diagrams for clarity.
- Prepare questions to engage students and check understanding.

Common Teaching Questions and Responses

Question: How would you handle a student who is struggling to locate a pressure point?

Expert Answer:

I would first ensure the student understands the anatomical location by referencing diagrams or models. I would guide them physically by gently assisting to locate the point, providing verbal cues, and encouraging them to feel the correct area. Repetition and positive reinforcement help build confidence. If necessary, I would suggest practicing on oneself or a partner to enhance spatial awareness. Patience and clear communication are essential to support the student's learning process.

Additional Tips for Success

- Stay Updated: Keep abreast of latest techniques, research, and best practices related to Ashi therapy.
- Practice Mock Exams: Simulate the exam environment, timing, and question types.
- Review Feedback: Learn from previous assessments or practice sessions to identify areas for improvement.
- Join Study Groups: Collaborate with peers to exchange knowledge and practice teaching.
