Problem 1: Understanding Currency Exchange Rate Movements

Scenario:

Suppose the U.S. dollar (USD) is expected to depreciate against the euro (EUR) over the next six months. How would this expectation influence an American company's decision to engage in a European project?

Analysis:

This problem introduces the concept of currency risk and hedging strategies. This problem encourages understanding of how international institutions serve as lenders of last resort, provide technical assistance, and foster economic stability. Students explore the differences between the IMF's short-term financial support and the World Bank's focus on long-term development projects.

Solution Approach:

- Describe the functions and objectives of each institution.
- Analyze real-world case studies where these institutions intervened.
- Discuss criticisms and limitations of their roles.

Practical Application:

Knowing how these institutions operate is vital for financial managers engaging in international projects or advising governments on economic policies.

Problem 3: Risks in Multinational Finance

Scenario:

Identify and explain the main types of risks faced by multinational firms operating across different countries.

Analysis:

This problem emphasizes risk management principles by categorizing risks such as:
