- Calculating the time intervals between phases
- Explaining the causes of lunar eclipses

Answers and Explanations:

Answers often include diagrams depicting the relative positions, and calculations demonstrating the approximately 29.5-day lunar cycle. They emphasize that the phases are a result of the relative angles between the Sun, Moon, and Earth, rather than any intrinsic change in the Moon itself.

3. Solar and Lunar Eclipses

Lab activities commonly involve predicting eclipse occurrences based on celestial alignments.

Core Questions:

- When and where do eclipses occur?
- Why are total eclipses rare?
- How do the nodes of the Moon's orbit influence eclipse seasons?
